REFERENCES

Working scholars cannot live by reprints alone, but to use a library these days given the usual "information" in a journal citation (sometimes only euphemistically called a reference) is no mean feat. And to expect someone to obtain such "references" on inter-library loan is to expect the impossible, or at least the improbable. In contrast, we believe that the burden is on the author and the editor (and the publisher, which should not have a treasurer who deems a full reference "too expensive"), not on the unsuspecting reader. We have therefore taken this opportunity to give the titles of articles, and the full name of each journal. Mistakes in the citations in the published literature are common, and difficult to catch; we hope that those that may remain here will be more obvious than is usual, and hence less of a burden on the interested reader.
